Securities Issues

April 2016

June 9th, 2016

Banco de Portugal publishes today, in table A.25 of the Statistical Bulletin and in *BPstat*, data on shares and debt securities issues for April 2016.

At the end of the period, the net securities issued (gross issues minus redemptions) by residents amounted to 2.1 billion euros, with debt securities accounting for nearly the total amount (Chart 1), of which 1.3 billion euros of long term debt securities.

The largest contribution to the net issues of the month was given by the general government sector (Chart 2), mainly due to 2.5 billion euros of debt se-

curities issued. The accumulated amount of general government net issues in the first four months of the year was 5.8 billion euros, the highest value for the first quadrimester since 2010.

The outstanding amount of securities issued by residents at the end of April reached 427.9 billion euros, corresponding to an increase of 1.0 billion euros relative to the previous month (Chart 3). This variation was originated by the month's positive net issues, partially compensated by the devaluation of debt securities issued by general government.
