Non-financial sector indebtedness April 2016

June 23rd, 2016

Banco de Portugal publishes today, in table A.20 of the Statistical Bulletin and in *BPstat*, the non-financial sector indebtedness statistics for April 2016.

In April 2016, the non-financial sector indebtedness amounted to 709.0 billion euros, of which 301.4 billion euros refers to the public sector and 407.6 billion euros to the private sector.

Comparing with March, there was an increase of 3.5 billion euros which was mainly due to the increase of 3.2 billion euros of the non-financial public sector indebtedness (Chart 1). This evolution reflects the increase of the indebtedness vis-à-vis the financial

sector (Chart 2).

The private sector indebtedness increased 0.3 billion euros when compared to the previous month, as a result of the increase of private corporations indebtedness vis-à-vis the financial sector and the external sector.

Chart 1 • Indebtedness of the non-financial sector by debtor sector

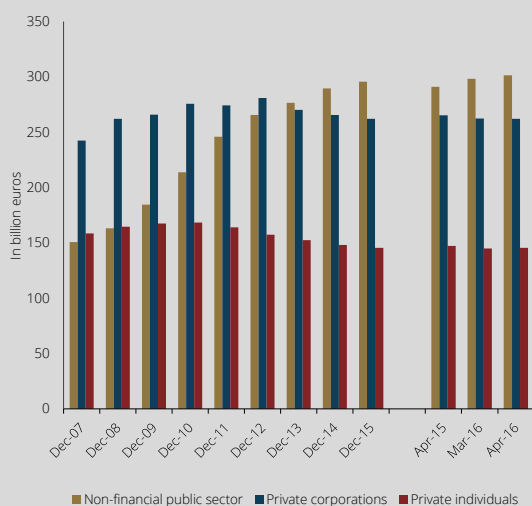

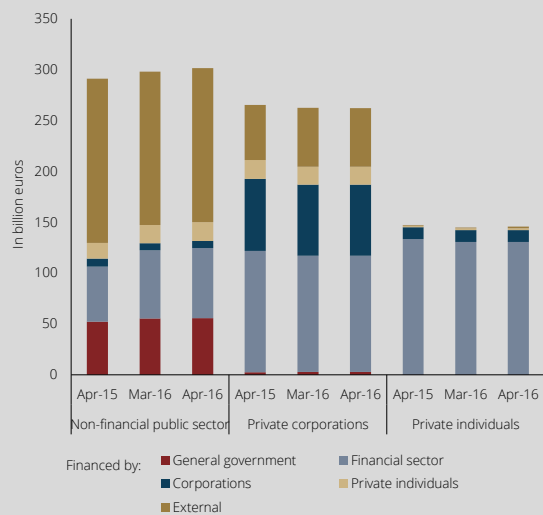

Chart 2 • Debt by debtor and creditor sectors
