

## STATISTICAL PRESS RELEASE

114 | 2017

# Non-financial sector indebtedness September 2017

22 November 2017

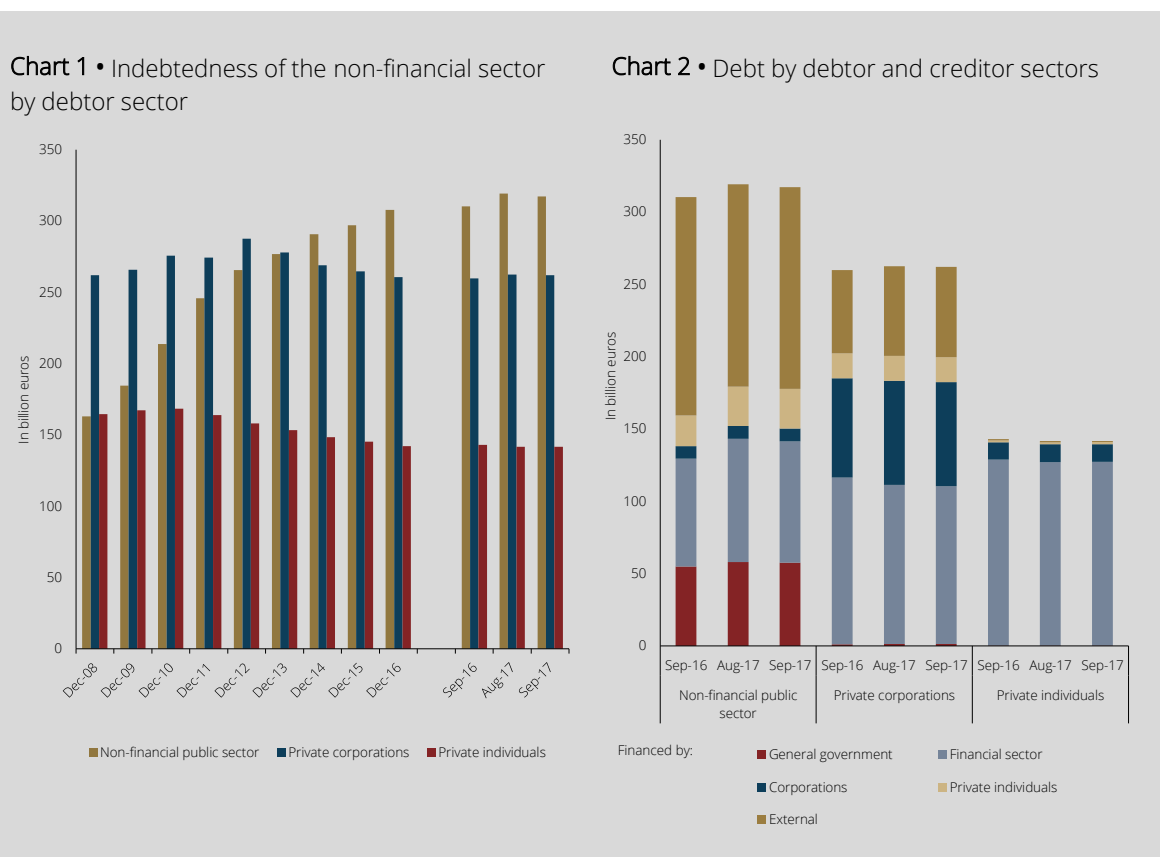

Today, Banco de Portugal publishes statistics, in Table [A.20](#) of the *Statistical Bulletin* and in *BPstat*, on non-financial sector indebtedness for September 2017.

In September 2017 non-financial sector indebtedness stood at €721.1 billion, of which €317.2 billion referred to the public sector and €403.9 billion to the private sector.

Compared with August 2017, public sector indebtedness decreased by €2.0 billion. In turn, private sector indebtedness declined by €0.1 billion (Chart 1).

The fall in public sector indebtedness was reflected in the decrease in external financing and financing granted by the financial sector and the general government (Chart 2).

Developments in private sector indebtedness reflected the decline in the indebtedness of private corporations vis-à-vis the resident financial sector, which was partly offset by higher external indebtedness of such corporations. Private individuals saw their indebtedness (€0.2 billion) vis-à-vis the resident financial sector and non-residents increase.

**Note:**

As of November 2017, Tables K.1.1, K.1.2 and K.2.1 of Banco de Portugal's *Statistical Bulletin* incorporate the series 'Maastricht debt net of deposits of the general government', given that this series is deemed to more fully supplement the indicator on debt net of deposits of the general government sector. The series 'Maastricht debt net of deposits of the central government' will still be included in Table K.2.1 of the *Statistical Bulletin*. Both series are also available in *BPstat* | Statistics Online.
