# Portuguese banking system | 4th quarter of 2022

#### Balance-sheet structure

Total assets decreased by 4.4% in the fourth quarter of 2022. This was mainly due to a decline in cash balances at central banks and other demand deposits (2.8 p.p. contribution).

The loan-to-deposit ratio narrowed by 0.8 p.p. to 78.2%, as a result of an increase in customer deposits (+1.1%), against a background of relatively stable customer loans (+0.1%). The share of central bank funding in assets decreased by 5.1 p.p. to 3.6%.

The liquidity coverage ratio (LCR) stood at 229%, decreasing by 25 p.p. from September 2022. This effect was chiefly due to a decrease in highly liquid assets, contributing 21.3 p.p. to the narrowing of the ratio, reflecting a reduction in cash balances at central banks and other demand deposits.

#### Asset quality

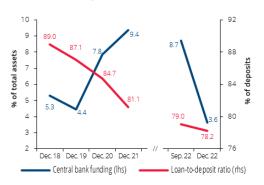

In the fourth quarter of 2022 the gross non-performing loans (NPL) ratio decreased by 0.2 p.p. to 3.0%. This reflected a decrease in NPLs (-0.3 p.p. contribution), more than offsetting the decline in performing loans (+0.1 p.p. contribution). The NPL ratio net of impairments stood at 1.3%.

Gross NPL ratios of NFCs and households fell by 0.7 p.p. and 0.1 p.p. to 6.5% and 2.3% respectively. The decrease in NPLs was the main driver behind these developments.

The NPL coverage by impairment ratio increased by 1.8 p.p. to 55.4%, reflecting a decrease in NPLs exceeding that of accumulated impairments. In NFCs it rose by 1.4 p.p. to 55.9%. The ratio for households stood at 55.1%, up by 6.0 p.p. and 0.4 p.p. to 40.4% and 64.1% in the segments of housing, and consumption and other purposes respectively.

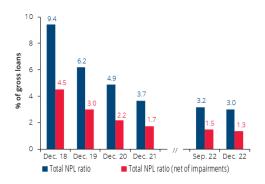

The non-financial private sector's stage 2 loan ratio stood at 11.1% (-0.4 p.p. in the quarter under review). The ratio declined by 0.4 p.p. and 0.2 p.p. to 8.1% and 16.0% in the NFC and household sector respectively.

## Profitability

In 2022 return on assets (ROA) and return on equity (ROE) rose significantly from 2021, to stand at 0.70% (+0.23 p.p.) and 8.8% (+3.3 p.p.) respectively. Developments in profitability reflected an increase in net interest income (+0.32 p.p. contribution to ROA) and a decrease in provisions and impairments (+0.14 p.p. contribution to ROA). Conversely, the rise in operational costs had a negative impact (-0.12 p.p. contribution to ROA).

The loan loss charge decreased by 0.04 p.p. compared with the same period a year earlier, to 0.29%.

The cost-to-income ratio fell by 3.0 p.p. year on year, to 50.4%, reflecting a greater increase in total operating income (-7.6 p.p. contribution) than in operational costs (+4.7 p.p. contribution).

### Solvency

In the fourth quarter of 2022 the total capital ratio and the Common Equity Tier 1 (CET1) ratio increased by 1.0 p.p. and 0.7 p.p. to 18.1% and 15.3% respectively. In both cases, developments reflected the reduction in the total risk exposure amount, and to a lesser extent an increase in own funds.

The average risk weight rose by 0.7 p.p. to 43.2%, due to a reduction in the share of lower risk components in assets.

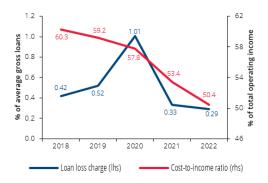

The leverage ratio rose by 0.3 p.p. from the previous quarter, to 6.7%.

#### Notes

(a) Banking system data are based on accounting/prudential information on a consolidated basis from credit institutions and investment firms with assets over 5 billion euros, reported to Banco de Portugal for supervisory purposes. The change introduced in the publication Portuguese

 $\textit{Bonking System: Latest Developments} \text{ in the } 2^{\text{nd}} \text{ quarter of 2021 was due to the entry into force of the Investment Firms Regulation}.$ 

- (b) Profitability indicators are calculated with annualised flows accumulated from January up to the reference period.
- (1) As a percentage of total assets.
- (2) Monetary and financial statistics. As a percentage of other monetary financial institutions' assets.
- (3) Ratio of customer loans (net of impairments) to customer deposits.
- (4) Corresponds to the amount of liquid assets held by credit institutions that satisfy requirements set in Commission Delegated Regulation (EU) 2015/61 of 10 October 2014. As a percentage of total assets.
- (5) Ratio of liquidity buffer to net cash outflows calculated under a 30-day stress scenario.
- $\begin{tabular}{ll} \textbf{(6) Ratio of the gross value of non-performing loans to the total gross value of loans.} \end{tabular}$
- $\label{eq:continuous} \mbox{(7) Ratio of non-performing loans net of impairments to the total gross value of loans.}$
- $\begin{tabular}{ll} (8) Ratio of impairments for non-performing loans to their gross value. \end{tabular}$
- (9) Ratio of gross stage 2 loans to gross loans.
- (10) Profit and loss for the year as a percentage of average assets.
- $(11) \, \text{Net interest income and net commissions less operational costs; as a percentage of average assets.}$
- (12) Profit and loss for the year as a percentage of average equity.
- (13) Ratio of operational costs to total operating income.
- (14) Flow of credit impairments as a percentage of total average gross credit granted to customers.
- (15) As a percentage of risk-weighted assets.
- (16) Up to June 2016 it corresponds to the ratio of Tier 1 capital to total assets. From September 2016 onwards it corresponds to the ratio of Tier 1 capital to total exposure (includes total assets, derivatives and off-balance sheet positions, and may exclude exposures to central banks upon authorisation of the supervisory authority).
- (17) Ratio of risk-weighted assets to total assets.
