

Which age group has more households with debt?

In Portugal, about 45% of households have debt.

The percentage of households with debt increases with the age of the reference person up to the age group 35-44 and decreases in the following age groups.

The percentage of households with debt reaches the lowest values in the groups in which the reference person is 65 or older.

Source: ISFF 2017.

Note: The reference person broadly corresponds to the individual with the highest income in the household.
